                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the prin specification, but was obtained in electronic format directly from WI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the

The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB5300-ABB5521). The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese.

Note: The sequence data for this patent is based on equivalent patent w0200177334 [published 18-oCT-2001] which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is the leafy cotyledon 1 transcriptional activator, LEC1 consensus sequence from Arabidopsis. This sequence is a HAP3-type CCANT-box binding protein, LEC1 expression initiates the formation of rembryo-like structures and improves growth and recovery of transformants. When appmixis occurs, i.e. the replacement of sexual reproduction by asexual reproduction, LEC1 expression in the muclellus integument, or cell specific expression in the megaspore mother cell would trigger embryo formation from maternal tissues only. This results in the production of seeds identical to the parent. Using LEC1, transgenic high yielding seeds could be developed. In addition, LEC1 could be used for positive selection of a transformed cell (transgenic plant), for increasing transformation efficiency and for increasing recovery of regenerated plants. The present sequence was used in the identification of the plant LEC1 consensus sequence (AAY96223).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLI

The present invention describes substantially purified human proteins CC (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 CC in the specification). ABN15762 to ABN27252 encode the human ORFX CC proteins given in ABP00010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated CC disorder in humans, and in the manufacture of a medicament for treating a CC syndrome associated with ORFX-associated disorder. ORFX polynucleotide CC sequences can be used in gene therapy. ORFX sequences can be used in the CC treatment of cancer, hyperproliferative disorders, cirrhosis of liver, CC psoriasis, benign tumours, keloid, degenerative disorders related to organ CC transplantation, cardiovascular diseases, diabetes mellitus, systemic CC steoarthritis, neurodegenerative disorders, disorders related to organ CC transplantation, cardiovascular diseases, diabetes mellitus, systemic CC storage disease, various immune deficiencies and disorders, infectious CC diseases, autoimmune disorders such as multiple sclerosis, rheumatoid CC arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host CC disease and autoimmune thyroiditis, myasthenia gravis, graft-versus-host CC disease and autoimmune thyroiditis, myasthenia gravis, graft-versus-host CC one degenerative disorders, or periodontal disease, and for gut correction or regeneration and treatment of lung or liver fibrosis, CC protection or regeneration and treatment of lung or liver fibrosis, CC systemic Cytokine damage.

                                                                                                                                                                                                                                                                                                                                   The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity inhibin activity and may be useful in the diagnosis and/or activity in the diagnosis and/or activity in the diagnosis and/or activity and may be useful in the diagnosis and/or activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the encoded proteins (AAO00010-ĀAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity tissue growth factor activity, immunomodulatory activity and activiny inhibin activity and may be useful in the diagnosis and/or
                                                                                                                                                                         Staphylococcus aureus 'WCUH 29'.
                                                                                                                                                                                                                                                                                                                     Staphylococcus aureus biofilm protein, biofilm A.

The biofilm polypeptides are useful for the C diagnosis and treatment of bacterial infections specifically caused by Staphylococcus, especially associated with formation of biofilm in a country of the treatment of diseases such as invasive and toxigenic diseases. Country the action of externation of special tracher of diseases such as invasive and toxigenic diseases, scalded skin syndrome, infections of upper respiratory tract (otitis conditions), active epiglottis, thyroiditis), lower respiratory (empyema, lung abscess), cardiac (infective endocarditis), constratory (empyema, lung abscess), cardiac (infective endocarditis), consisting, cardiac (infective endocarditis), consisting, cardiac (secretory diarrhoea, splenic abscess, retroperitoneal abscess), CNS (cerebral abscess), eye (blepharitis, conjunctivitis, cardiac trip, endophthalmitis, preseptal and orbital cellulitis, intrarenal cand perinephric abscess, toxic shock syndrome), skin (impetigo, cand perinephric abscess, toxic shock syndrome), skin (impetigo, bacterial conjunctivis), cutaneous abscess, cellulitis, osteomyelitis).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic complypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by p. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelltis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central congruence or absence of p. acnes in a particularly involved in the inflammatory clesions associated with acne vulgaris. A method for detecting the presence or absence of p. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention cand determining the amount of bound protein in the sample. The cand determining the amount of bound protein in the sample of antibodies specific for p. acnes proteins. These antibodies can be used to downregulate expression and activity of p. acnes polypeptides and therefore treat p. acnes infections. The antibodies may also be used as confident of the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at first, but was obtained in electronic format directly from WIPO at first, and the production of antibodic specification, but was obtained in electronic format directly from WIPO at first and provided and activity of p. acnes presence, for example, by the security of the printed specification, but was obtained in electronic format directly from WIPO at first and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided as for this patent did not form part of the printed control of the provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and provided and pro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by CP acnes. The disorders include SAPHO syndrome (synovitis, acne, CP acnes is also involved in infections of bone, joints and the central CP acnes is also involved in infections of bone, joints and the central CP resence or absence of P. acnes in a patient comprises contacting a CP presence or absence of P. acnes in a patient comprises contacting a CP presence or absence of P. acnes in a patient comprises contacting a CP sample with a binding agent that binds to the proteins of the invention CP conditions of bound protein in the sample. The CP polypeptides may be used as antigens in the production of antibodies convergulate expression and activity of P. acnes polypeptides and CP convergulate expression and activity of P. acnes polypeptides and CP convergulate expression and activity of P. acnes polypeptides and CP convergulate expression and activity of P. acnes polypeptides and CP convergulate expression and activity of P. acnes polypeptides and CP convergulate expression and activity of P. acnes polypeptides and CP convergulate expression and activity of P. acnes polypeptides and CP convergulate expression and activity of P. acnes polypeptides and CP convergulate expression and activity of P. acnes polypeptides and CP convergulate expression and activity of P. acnes polypeptides and CP convergulate expression and activity of P. acnes polypeptides and CP convergulate expression and activity of P. acnes polypeptides and CP convergulate expression and activity of P. acnes polypeptides and CP convergulate expression and activity of P. acnes polypeptides and CP convergulate expression and activity of P. acnes polypeptides and CP convergulate expression and activity of P. acnes polypeptides and CP convergulate expression and activity of P. acnes polypeptides and CP convergulate expression and activity of P. acnes polypeptides and CP convergulate expression and activity 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5483 squences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for

AAZ54537 to AAZ54576 and AAZ54616 to AAZ5473 represent PCR primers used in the exemplification of the present invention. The polypeptides, the polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic resgents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polypucleotides of the invention may also be used in gene therapy protocols.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Petersen

The inventiuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG175) and the encoded proteins
LEC1 polypeptide is encoded by the leafy cotyledon-1 (LEC1) gene (see ANV61022-24) of Arabidopsis thaliana. Full-length LEC1 polypeptide can act as a subunit of a protein capable of acting as a transcription factor in plant cells. The LEC1 gene is embryo-specific and can be used to modulate development (claimed) of embryos or other organs in plants. Inhibiting expression can be useful e.g. in weed control (by transferring an inhibitory sequence
                                                                                                                                                   New isolated plant leafy cotyledon-1 gene - used for, e.g. increasing storage protein content in producing fruit with small and non-viable seed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                        19-FEB-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ន្តន្តន្តន្ត
                                       LEC1 genes are thought to play a central role in late embryogenesis, in cospecifying cotyledon identity during embryo development. LEC1 polypucleotides may act as transcription factors. LEC1 polypucleotides are conserved to the polypucleotide are conserved to the polypucleotide are conserved to the polypucleotide is a seed development and for inducing ecotopic development of embryonic tissue in a plant. In both cases, the LEC1 colypucleotide is introduced into the plant through a sexual cross and conserved in an antisense orientation with a second heterologous polypucleotide selected from AP2 and RAP2 genes of Arabidopsis. The coll polypucleotide is also useful for targeting expression in a seed, and for preparing expression cassettes for suppressing or enhancing conditions. LEC1 gene expression, which is useful in weed control or for improving nutritional value of plant tissue respectively. LEC1 colypeptides and polypucleotides are especially used for increasing or decreasing storage protein content in cotyledons or leaves. LEC1 also increases reproductive tissue mass, e.g., increases fruit size, seed content is the protein or its oil mass.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

CC sequence that encodes LEC-1 protein comprising a subsequence that comprising a subsequence that compression are used for modulating considerable in the induction of embryonic characteristics core seed development in a plant. Polynucleotide sequences from LEC1 combryos, to modulate the development of embryos or the characteristics core an embryo on other organs (e.g., by enhancing expression of the gene core in a transgenic plant). Modulation of the expression of LEC1 gene is core to manipulate a number of useful traits, such as increasing or confect sexpression is useful in weed control or to produce fruit with small and non-viable seed. Enhanced expression of LEC1 genes is competent content in control or to produce fruit competent gene promoters are useful for directing gene expression of LEC1 genes is competent gene product is located in embryos or seeds. Expression of CEC-1 genes in plant reproductive or vegetative tissue induce ectopic expression of cells and tissues, together with another plant nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventiuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG187) and the encoded proteins (ABB57037-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                 The invention relates to isolated nucleic acid molecules encoding CC novel human secreted extracellilar matrix proteins (SPS). The polynucleotides and proteins are used to prevent, treat a medical CC condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. For example, disorders associated with decreased CC expression of SPs. The SP polynucleotide or a vector expressing them may be administered to treat diseases by gene therapy. Antisense molecules CC may be administered to down regulate expression of SPs by binding with CC the cells own genes and preventing their expression. The polynucleotides CC may also be used as DNA probes in diagnostic assays. The SPs may also be used as SNA probes in diagnostic assays. The SPs may also be used as antigens to produce antibodies and to identify modulators (agonists may also be used to down regulate expression and activity of SP and as diagnostic agents for detecting the presence of SPs in samples. The disorders include for example: immune/autoimmune diseases (e.g. HIV CC (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis), cancers and hyperproliferative disorders (e.g. malanomas, neoplasms of the breast or liver, Sezary syndrome and CC Gaucher's disease), neurological diseases (e.g. Alzheimer's disease, Cardiac arrest, tachycardia and angina), infections caused by bacteria, viruses cinclude wound healing, maintenance of organs before transplantation,

CC (ABP47846-ABP48110) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are considered from a range of human tissues disclosed in the specification. Crime nucleic acids, proteins, antibodies and (ant) agonists are useful cin the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adranal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (C) immune disorders e.g. Addison's disease, allergies, autoimmune chaestoyatese, multiple sclerosis, rhewmatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (C) disease, multiple sclerosis, rhewmatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (C) dispay; and (f) infectious diseases such as viral, bacterial, fungal cand parasitic infections.

CC Note: The sequence data for this patent did not form part of the corimon useful and seguination, but was obtained in electronic format directly from USPFO at segdata.uspto.gov/sequence.html?DocID=999909764870.

Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Telford J, N
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus sequences (S1), given in (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for

                                                                                                        The present sequence is that of the IlaIIC gene product, an endonuclease, part of a Lactococcus lactis restriction/modification (R/M) system. The LlaII R/M system is similar to the MboI system which recognises the sequence 5'-GATC-3' and cleaves it before the guanine. A plasmid contg. the DNA (AAT30440) encoding the R/M system can confer phage resistance to a bacterium, such as providing resistance to phage-sensitive dairy cultures. The DNA and proteins can be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to stabilised recombinant animal cell line expressing envelope 2 protein of HCV. The present sequence represents the envelope 2 protein of HCV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

                                                                                                                                                                                                                                                                        This AA sequence encodes a restriction endonuclease, R. IlaAI, with the recognition sequence 5'-*GARC-3' (* indicating point of cleavage) from the plasmid-derived type-II restriction-modification system from Lactococcus lactis subsp. cremoris W9, LlaAI. R. IlaAI is one of 3 proteins in this restriction-modification system, along with a 284 AA methylase (M.IlaAIA, AAW02160), and a 269 or 257 AA methylase (M.IlaAIB, AAW02162, respectively). This restriction-modification system may be used in a method for conferring increased virus resistance, more specifically phage resistance, to a L. lactis errain resistance, more specifically phage resistance, to a L. lactis

                                                                                                                                                                                                                                  Ś
                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a protein (ABP25413-ABP30895) from group B CC streptcoccus/GBS (Streptcoccus agalactiae) or group A streptcoccus/GBS (Streptcoccus) pyogenes), comprising one of 5483 sequences (31), given in the specification. The proteins have antibacterial and antiinflammatory CC activity. (1), nucleic acids encoding (1), ABN66044-ABN71526 and CC antibodies that bind (1) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptcoccus bacteria, particularly S. agalactiae and S. pyrogenes. CC Mucleic acids encoding (1) are used to detect Streptcoccus in a cc biological sample. (1) is used to determine whether a compound binds to CC (11). A composition comprising (1) or a nucleic acid encoding (1), may be used as a vaccine or diagnostic composition. The disease caused by CC used as a vaccine or diagnostic composition. The disease caused by cused in gene therapy. Antibodies to (1) are used for affinity produce (1) and may be used in gene therapy. Antibodies to (1) are used for affinity immunoassays, and distinguishing/identifying

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: SHABON, USMAN
APPLICANT: BERGSMA, DERK
TITLE OF INVENTION: A YAK-1 RELATED SERINE/THREONINE
TITLE OF INVENTION: PROTEIN KINASE-HTLAR33
NUMBER OF SEQUENCES: 6
NUMBER OF SEQUENCES: 6
                                                                                                                    TELEFAX: 610-407-0701
TELEX: 846169
INFORMATION FOR SEQ ID NO: 3
SEQUENCE CHARACTERISTICS:
LENGTH: 557 amino acids
                  TYPE: amino acid
STRANDEDNESS: single
TOPOLOGY: linear
MOLECULE TYPE: protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ADDRESSEE: RATNER & PRESTIA

APPLICANT: BERGSMA, DERK
APPLICANT: SHABON, USMAN
TITLE OF INVENTION: A YAK-1 RELATED SERINE/THREONINE PROTEIN KINASE-HTLAR33
FILE REFERENCE: GH-70172-1
CURRENT APPLICATION NUMBER: US/09/271,815
CURRENT FILING DATE: 1999-03-18
EARLIER APPLICATION NUMBER: 09/027,064
EARLIER FILING DATE: 1998-02-20
EARLIER FILING DATE: 1998-02-20
EARLIER FILING DATE: 1998-02-20
SEATLIER FILING DATE: 1997-07-28
NUMBER OF SEQ ID NOWER: 09/027,07-28
NUMBER OF SEQ ID NOS: 6
SOFTWARE: PATE TO NOS: 6
SEQ ID NO 2
LENGTH: 557
TYPE: PRT
